

## Custom Dynamics<sup>®</sup> 4 Way Hazard Kit Installation Instructions

We thank you for purchasing the Custom Dynamics® 4 Way Hazard Kit. Our products utilize the latest technology and highest quality components to ensure you the most reliable service. We offer one of the best warranty programs in the industry and we back our products with excellent customer support. If you have questions before or during installation of this product please call Custom Dynamics® at 1(800) 382-1388.

Part Numbers: 4WAYHAZARDKIT		Installation:	
Package Contents:	- Small Heat Shrink Tube	1.	See wiring diagram on page 2. Strip insulation off one end of fuse holder and crimp terminal ring onto wire, heat insulation of termi- nal ring to form a waterproof connection.
- Fuse Holder - Lar - 10 Amp Fuse - Bla	- Large Heat Shrink Tube	2.	Remove fuse from fuse holder (will reinstall at step 16). Connect terminal ring to positive side of battery.
	- Black/Red 18 AWG - Quick Splice Connectors (2)	3.	Crimp remaining end of fuse holder wire to female slider and slide onto rocker switch male terminal
- Female Slides (2)	- 3M Adhesive Promoter - 3M Double Sided Tape	4.	Locate convenient location for rocker switch, clean location and apply 3M promoter, let dry and mount with 3M double sided tape.
- Rocker Switch - Diodes (2)	- Tie Wraps (10)	5.	Cut connector off end of hazard flasher.
		6.	Connect remaining end of rocker switch to hazard flasher red in- put wire using remaining female slider.
		7.	Cut 2 small pieces of black 18 AWG, approximately 1" long, strip insulation off both ends. Strip insulation off black wire on hazard flasher. Slide a piece of small heat shrink tubing over black output wire of hazard flasher. Solder both 1" pieces of black wire to the black wire of hazard flasher so that you form a "Y". Slide heat shrink tubing over solder joint and heat with heat gun to form a water proof joint.
		8.	Cut excess leads off diodes such that you are left with approximately $\frac{1}{2}$ " of leads. Solder lead of diode to one of the black wires, be sure strip on diode is away from this joint. Repeat for remaining diode.
		9.	Cut red wire in half and strip insulation off one end of both wires.
Fitment: Metric Models		10.	Solder red wire to diode end with stripe. Repeat for remaining diode.
	ENTION	11.	Slide large piece of heat shrink tubing over diodes and solder joints, heat with heat gun to form a water proof joint.
Please read all Inf	ormation below before Installation	12.	Locate left and right turn signal wires on bike, refer to shop guide or qualified service personnel.
Warning: Disconnect the negative battery cable from battery; refer to owner's manual. Failure to do so may result in electrical shock, injury or fire. Secure		13.	Connect one red wire to left turn signal wire using quick splice connector.
negative battery cable away fro voltage sources on vehicle.	n positive side of battery and all other positive	14.	Connect remaining red wire to right turn signal wire using remain- ing quick splice connector.
Safety First: Make sure the bik cal components are cool to the	te is parked on a level surface and bike's mechani-	15.	Secure all wires with tie wraps.
	te courn ate safety gear including safety glasses when ectrical work. It is highly recommended that nout this installation process. Temperature of bike for tape to properly cure. Read all directions	16.	Install fuse into fuse holder.
soldering or performing any ele safety glasses be worn through		17.	Check for proper operation of both 4 way hazards and turns sig- nals before operating motorcycle.
		tim	TE: Do not operate turn signals & 4 way hazards at the same e. 4 ways are designed to be used for emergency or special e only.
